BRIGHT IDEAS ENTRY

The product/service

Provide an outline of your product/service:

1. What is it and how does it work?
2. What are its key features and benefits?
3. How does it solve the identified problem or need?

[Watch guidance video](#)

We are an innovative IT solutions providers specialising in delivering tailored IT services to retail chains. Our offerings include software support, hardware installations, and comprehensive IT infrastructure management. We are initially planning to tailor our services to the retail store of Waitrose to solve their IT/Tech related problems. We believe it's essential for retail chains to have up to date IT infrastructure in place to ensure they can run their stores smoothly on a daily basis. The key features is that we will automate the mundane IT related tasks such as ensuring they have up to date hardware and software to avoid any technical failure and to ensure their business can continue to run without any issues. We have identified that Waitrose has had a technical failure in the past where their servers were not responding to the request which they received and it was later discovered that this occurred because they had really old servers. This led to them losing a lot of revenue because this occurred across all their stores. We believe this could have been avoided if Waitrose were to partner with us such that they won't have to worry about the very technical/IT related side of their business and could instead focus on delivering a great service to their customers. We will be responsible for the maintenance of both their hardware and software needs to ensure that none of their services is left out of date or that their not running old legacy software and or hardware.

The need or problem you are addressing

Provide key information about:

1. The problem or need you have identified;
2. The group of people who experience the problem and would use your product/service;
3. Any other beneficiaries.

[Watch guidance video](#)

We have identified that retail chains such as Waitrose often neglect their IT/Tech related side by either investing in really old or outdated hardware and or software. This often results in them having a technical issue of some sort, whether it be their servers not running properly or their customers complaining about issues regarding their experience with the POS systems. This inevitably leads to them gaining bad reputation or even customers stop shopping at their stores altogether. This in turn leads to long term revenue loss which makes their business less prosperous. By providing them with the service which offer, such as updating their software or hardware, giving them suggestions on which software they should use and ensuring their servers, POS systems etc; are running properly, they will need to not worry about their technical/IT related side and could instead only focus on delivering the best services and products to their customers. This would ensure that their stores can continue to operate without any technical or IT related issues and they can be rest assured that no technical failure of any sort would occur. The customers would also benefit from this as they will face less challenges from this.

Your first customer or user

1. Who do you expect your first customer or user to be?
2. How will you promote your product/service to them?
3. How will your product/service be made available or distributed?

[Watch guidance video](#)

We strongly believe that our first customer would be Waitrose as it's a reputable retail chain and we believe it would benefit enormously from our services. This is because despite Waitrose being a really good and reputable retail chain, it has had quite a few technical and or IT related issues in the past. One noteworthy example is when in 2022 their servers were not responding and the customers ended up not being able to pay, and this occurred across all their chain stores. This led to many customers being disgruntled and many of them either ended up not coming back or came back after a very long time. We will promote our services to them by showing them the exact issues that we managed to identify in their business, such as the one mentioned previously but it's not only limited to that one. Furthermore, we would show them just how much their business would improve if they were to utilise our services and the amount of time and angry customers they would save and avoid. Our service would be distributed by us helping them directly in solving their technical related issues such as installing new software and upgrading hardware.

Alternatives & Competitors

Explain how your product/service is different from what already exists:

1. Who else is providing something similar?
2. How else could your customer/user have the problem you've identified solved
3. Why should your first customer choose your product/service, rather than your competitors'?

[Watch guidance video](#)

When it comes to the alternatives and competitors there are a few that are noteworthy to mention. Firstly, there are the giant tech companies they provide the latest hardware and software for business to solve the exact problem that our business solves. This includes companies such as Microsoft. There are also other companies that are smaller that sell hardware and software to business, and they are many. Our customers could simply buy either of the products or services offered by these companies. However, we believe this is not a variable option because the product and services which they offer are often very general and are meant to solve very specific issues that companies such as Waitrose have. This is because they specialise in providing a collection of hardware and software that can then be customised by their customers. As mentioned previously, we strongly believe that it is in the best interest of Waitrose to avoid managing the IT and technical side of their business so they can focus on delivering the best service to their customers. By outsourcing this to us, we would ensure that all their hardware and software are up to date and are not going to have issues.

Elevator Pitch

Provide a short summary of your idea, intended to impress someone who might help to fund it.

[Watch guidance video](#)

We are a tech and IT service agency that specialises in helping retail chain business run the latest and most reliable hardware, so they avoid having any technical or IT related issues when running their stores and focus instead on providing the best service to their customers. By avoiding any technical and IT related issues they can ensure there are no disrupting events in the future such as server failure or POS failure that could lead to a bad reputation or in the worst-case losing customers. We will provide them with the latest PCs servers and POS systems and software.

Attachment(s)

You may upload ONLY ONE A4 page document in PDF file format only to support your Bright Idea, e.g. diagrams and photographs

SUMMARY AND BACKGROUND

What was the inspiration for your idea?

Describe where your idea comes from and what or who inspired it.

[Watch guidance video](#)

The inspiration is that we are regular customers of Waitrose and we have faced technical and IT related issues when shopping in the past, and we would like to solve this.

Public Summary

The public summary may be used in media related to the event, so we recommend you omit any sensitive information that you do not want released into the public domain. [Watch guidance video](#)

We are a software and hardware providing agency that specialise in helping retail chains in running the latest hardware, software.

THE ROAD TO THE FINAL

I am aware that the next/2nd stage of the competition is the Bright Ideas Sprint. I am aware that these will take place between 13 January - 21 January 2025. I will make myself available to attend.

Yes
